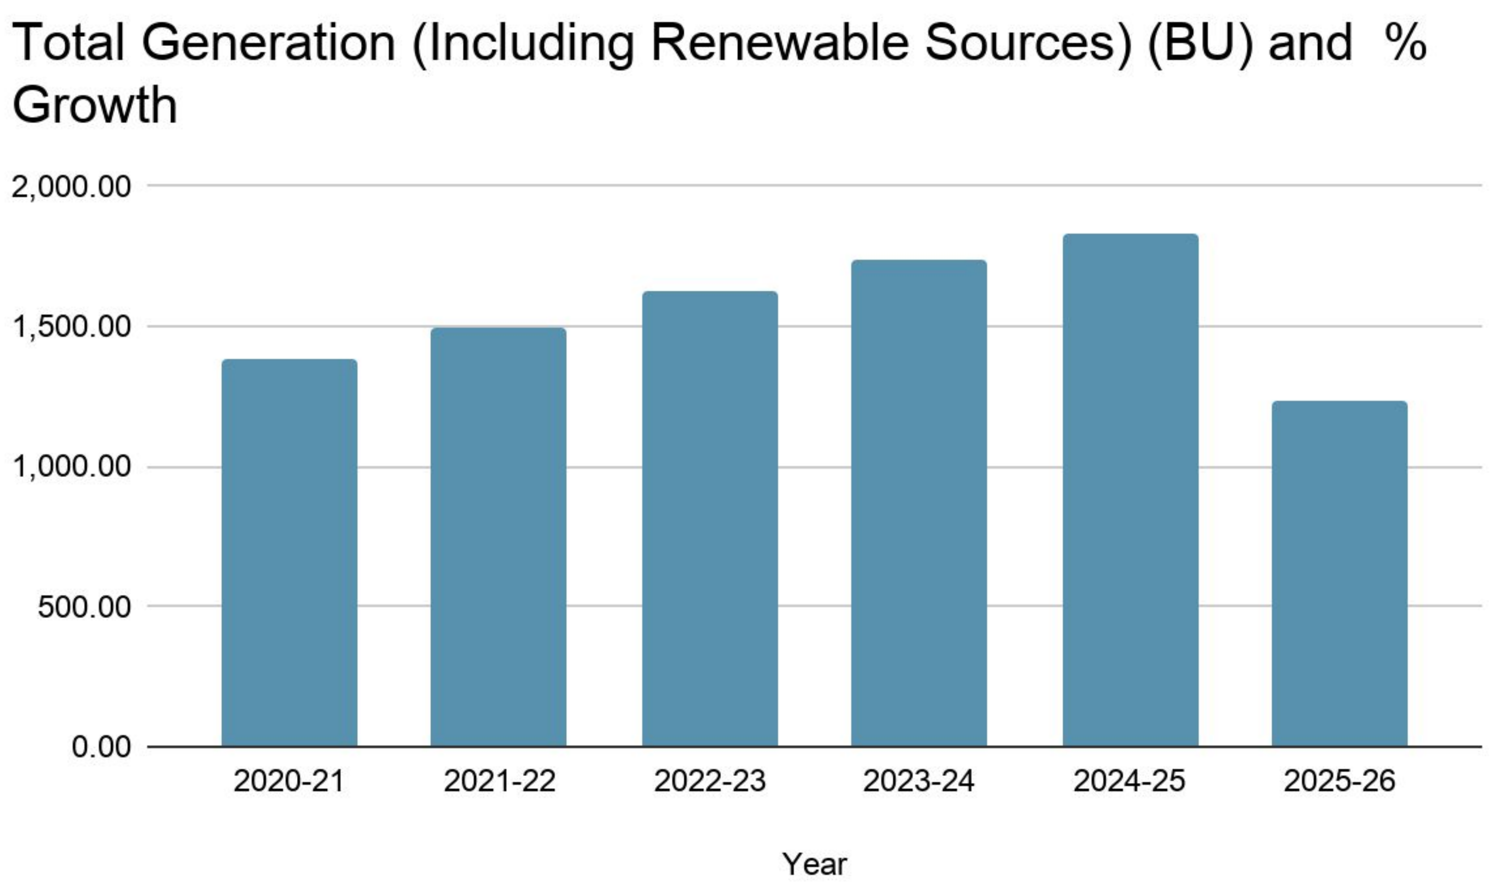
# Energy Sector Overview

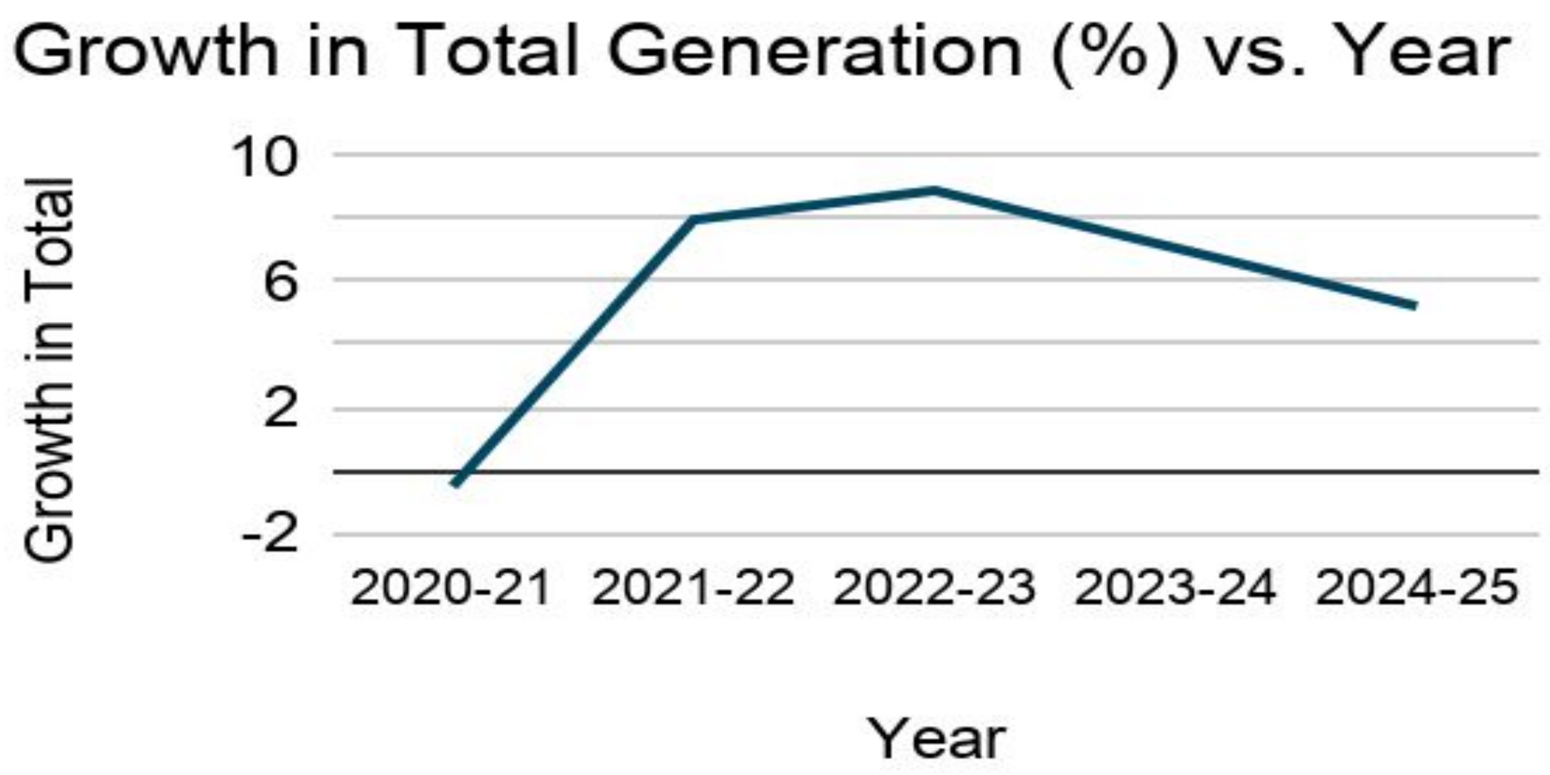
The global energy landscape is undergoing a major transition, with energy playing a central role in economic growth and sustainable development. India has been one of the key contributors to rising global energy demand, accounting for nearly 10% of the increase in global energy demand since 2000. During this period, India's energy consumption has almost doubled, increasing the country's share in global energy demand from about 4.4% in 2000 to around 5.7% in 2013. Primary energy demand in India grew from around 441 million tonnes of oil equivalent (Mtoe) in 2000 to about 775 Mtoe in 2013, and it is projected to reach 1,250–1,500 Mtoe by 2030 according to estimates by the International Energy Agency and India's Integrated Energy Policy. Despite this strong demand growth, domestic energy production has not kept pace with consumption needs, and the country's dependence on energy imports is expected to increase, with over 40% of primary energy supply likely to be imported by 2040 compared with about 32% in 2013. Energy availability also plays a crucial role in improving living standards, as countries achieving high levels of human development typically require significantly higher per-capita energy consumption.

To address the challenge of rising demand while ensuring environmental sustainability, India has increasingly focused on improving energy efficiency and conservation. Enhancing energy efficiency helps achieve the dual objective of sustainable development and economic competitiveness, while also reducing environmental and health impacts associated with hydrocarbon-based energy use. Recognising these challenges, the Government of India has adopted a two-pronged strategy: expanding cleaner energy generation and improving energy efficiency on the demand side. On the supply side, the government is promoting greater adoption of renewable energy sources such as solar and wind, while also introducing more efficient technologies like supercritical coal-based power plants. On the demand side, several policy initiatives have been introduced to improve energy efficiency across industries, buildings, appliances, and transportation.

# Vision and Mission of the Pharma Sector

India's power sector has expanded significantly, with total installed capacity reaching 509,743 MW as of November 2025. The private sector dominates with about 54.6% share, followed by the central sector (23.4%) and state sector (22%), highlighting strong private participation. In terms of energy mix, non-fossil fuel sources account for about 51.6% of capacity, slightly higher than fossil fuels at 48.4%, with solar and wind contributing a major share of renewable capacity. Electricity generation in the country has steadily grown from about 808 BU in 2009-10 to 1,829.7 BU in 2024-25, reflecting rising demand and capacity expansion. The government has set a generation target of 2,000.4 BU for 2025-26. Over the years, power shortages have declined sharply, with energy deficit falling from over 10% in 2009-10 to nearly negligible levels in recent years, indicating improved supply reliability and infrastructure. Overall, the sector is moving toward higher capacity, better power availability, and a stronger renewable energy share, supported by reforms under the Electricity Act 2003.





KEDIA ADVISORY

# Indian Pharma Sector – Valuation & Return Metrics

| Name | Cmp (Rs) | M Cap (Rs.Cr) | PE | ROE % | ROCE % | Debt / Eq | Div Yield % | EPS |
|---|---|---|---|---|---|---|---|---|
| NTPC | 390.6 | 378751.96 | 15.7 | 12.13 | 9.95 | 1.33 | 2.17 | 24.93 |
| Adani Power | 149.1 | 287534.78 | 25.11 | 26.1 | 22.54 | 0.83 | 0 | 5.94 |
| Power Grid Corpn | 303.7 | 282459.31 | 18.16 | 17 | 12.78 | 1.37 | 2.96 | 16.69 |
| Adani Green | 865.95 | 142637.27 | 86.49 | 14.61 | 8.7 | 4.52 | 0 | 9.13 |
| Tata Power Co. | 402.3 | 128548.48 | 33.97 | 10.97 | 10.81 | 1.86 | 0.57 | 11.87 |
| Adani Energy Sol | 1010.7 | 121413.55 | 54.17 | 13.64 | 10.23 | 1.95 | 0 | 18.7 |

**NTPC Limited** – Stable PSU power stock with **low PE, steady ROE and strong dividend yield.**

**Adani Power Limited** – High profitability thermal power player with **strong ROE and relatively low debt.**

**Power Grid Corporation of India Limited** – Transmission leader with consistent returns and **attractive dividend yield.**

**Adani Green Energy Limited –** Renewable energy growth stock **trading at premium valuation with higher leverage.**

**Tata Power Company Limited** – Diversified utility with **balanced renewable growth and moderate valuation.**

**Adani Energy Solutions Limited** – Power transmission company with **strong earnings growth but higher valuation.**

# Nifty Energy Index Performance

| Technical Reading | RSI | CCI | MACD | Choppiness | Stochastic | ADX |
|---|---|---|---|---|---|---|
| Nifty Energy | 57 | 83 | 210 | 57 | 89 | 12 |

Price consolidating within a well-defined range between 33,000 support and 37,200 resistance zone.

Index trading near 50-week moving average, indicating equilibrium between buyers and sellers.

RSI at 57 and rising, signaling improving momentum without entering overbought territory.

MACD showing bullish crossover, suggesting gradual shift in momentum toward upside.

Volume expansion during recent advances indicates accumulation within consolidation structure.

# NTPC & Powrgrid Show Breakouts on Weekly Charts

KEDIA ADVISORY

## NTPC Technical Outlook

NTPC is forming a rounding bottom pattern on the weekly chart, suggesting a gradual trend reversal after prolonged consolidation. The price has moved above the 50-week moving average near ₹341, which now acts as immediate support. Key resistance is placed near ₹413, while stronger support lies near ₹374. RSI is around 71 and trending higher, indicating strong momentum. MACD has generated a bullish crossover with rising histogram bars, while steady volume improvement confirms buying interest.

If the stock sustains above ₹391–₹395, it may continue moving toward the ₹413 resistance zone. On the downside, support is placed at ₹374.

**Recommendation: BUY NTPC ABV 390.00 TGT 413.00 SL BELOW 374.00. NSE**

## Powergrid Technical Outlook

POWERGRID has broken out from a **"Falling Channel"** on the weekly chart, indicating a potential trend reversal. The price is sustaining above the 50-week moving average near ₹278, which now acts as immediate support. Key resistance levels are seen near ₹312 and ₹321. RSI is rising around 66, showing strengthening momentum, while MACD has delivered a bullish crossover with improving histogram. Volume expansion during the breakout confirms stronger buying interest.

If the stock holds above ₹292–₹295, the upside may extend toward ₹312. A decisive move above this level could push prices toward ₹321. On the downside, support is placed at ₹290.

**Recommendation: BUY POWERGRID ABV 303.00 TGT 321.00 SL BELOW 290.00. NSE**
